

LOGISTICS AND INVENTORY MANAGEMENT

Logistics management plans, implements, and controls the efficient, effective forward and reverse flow and storage of goods, services, and related information between the point of origin and the point of consumption to meet customer & and legal requirements. Also, logistics management controls processes inside a company (warehouse logistics) and outside a company (transport logistics). Besides logistics service providers, Inventory is a critical part of any organization (private, public, or NGO) that works with products, parts, or materials (items). Whatever technique is implemented in an organization to reduce inventory, somewhere in their supply chains inventory will be held – Just in Case!

■ Course Objective

Upon the completion of this two-day training, participants are expected to:

- ☒ How can we deliver items to a customer as quickly as possible?
- ☒ How many items should we buy from vendor so that they are not spoiled in the warehouse?
- ☒ Where should warehouse workers pick the goods? What is the optimal path to the item in a warehouse?
- ☒ Where should warehouse workers pack the goods?
- ☒ What vehicle should load the goods?

■ Course Structure
